Step 1 Demographics Report

Overview

This report was generated automatically from the Step 1 demographic harmonization pipeline.

Metric	Value
Participants included in Step 1 summaries	36
Questions summarized	21
Globally excluded participants	2

Global Participant Exclusions

The following participant IDs were removed from all Step 1 analysis tables, counts, and plots after Step 3 review. Their files remain on disk for audit only, and future downstream steps should continue to honor this exclusion list.

Metric	Value
PID006	Global downstream exclusion after Step 3 review: Exc from Step 1 and Step 2 summaries and from future stream analyses after Step 3 documented session 20 12_002 as an implausibly short 10.420224 second rec with no paired PsychoPy log.
PID037	Global downstream exclusion after Step 3 review: Exc from Step 1 and Step 2 summaries and from future stream analyses because a behavioral log exists but no f session folder was found in Step 3.

Core identification and mobility variables

age

Metric	Value
Group	Core identification and mobility variables
Prompt	Age (in years):
Type	numeric
Participants	36
Valid responses	36
